How to install your
Timber Venetian Blind
#65101-21721-C

Required Tools

Included Hardware

The hardware can be found in the end of every box.

1 Installation Brackets

**Installing inside the window frame...**
- Measure from front of window opening 90mm for a 50mm slat or 103mm for a 63mm slat.
- Place bracket in position and mark where the 2 screws will go.
- We recommend drilling pilot holes for screws using a 2mm bit.
- Fix bracket into position using 2 long screws.
- Repeat for bracket at other end of blind.

**Installing outside the window frame...**
- Place bracket in position on outside of window frame at the top end of where you want the blind to sit (normally flush with outside of architrave).
- Mark where the 2 screws will go.
- We recommend using a spirit level to align brackets if not installing on the architrave.
- We recommend drilling pilot holes for the screws using a 2mm bit.
- Fix bracket into position using 2 long screws.
- Repeat for bracket at other end of blind.

2 Support Brackets (only required if supplied)

- Evenly space the support brackets between the installation brackets, offset so they will not interfere with the blind ladder cords. Measure bracket position from left of blind.
- Measure and mark the support bracket position on window frame.
- Place bracket in position and mark where the 2 screws will go.
- We recommend drilling pilot holes for the screws using a 2mm bit.
- Fix bracket into position using 2 long screws.

3 Valance Receptor Clips

- Hold the valance in front of the headrail to align the valance receptor clips with the slots on back of valance.
- Attach the valance receptor clips to the headrail.

4 Valance Plugs

- Hold the valance in front of the headrail to align the positions of the valance plugs.
- Attach valance plugs to valance as per diagram.
- Fix valance plug into position using small screw.

5 Install Blind

- Open doors on installation brackets.
- Slide the blind into position.
- Close doors on installation brackets.
- Use your hand to support bottom rail when lifting blinds over 2m.
Installation continued…

6 Valance Returns
- Only for blinds installed on the outside of the window frame.
- Attach the valance returns to the valance using the valance return clips.

7 Attach Valance to Blind
- Attach valance by lining up clips and plugs then push straight back into headrail.
- Valance can be removed and is height adjustable.
- Remove by pulling out and down (do not lift up from bottom of valance).

8 Hold Down Brackets
**Installing inside the window frame…**
- Position hold down bracket vertically inside window frame where the bottom rail hangs naturally, mark where the 2 screws will go.
- We recommend drilling pilot holes for the screws using a 2mm bit.
- Insert bracket hole into bottom rail.
- Repeat for bracket at other end of bottom rail.

**Installing outside the window frame…**
- Position hold down bracket horizontally outside window frame where the bottom rail hangs naturally, mark where the 2 screws will go.
- We recommend drilling pilot holes for the screws using a 2mm bit.
- Insert bracket hole into bottom rail.
- Repeat for bracket at other end of bottom rail.

9 Child Safety Cleat
- Attach the Child Safety Cleats to the wall at least 1.6 metres off the ground using 2 medium screws for each cleat. Ensure the cleat is fixed firmly.
- Tie all the loose lift cord around the Child Safety Cleat at all times.

To avoid creating a possible strangulation hazard for children, the corded or chained internal window covering must be installed in such a way that a loose cord or chain cannot form a loop 220 mm or longer at a height of less than 1600 mm above floor level.

- A cord/chain guide may be installed lower than 1600 mm above floor level if the cord/chain is sufficiently secured or tensioned to prevent a loop 220 mm or longer from being formed.
- If a cord/chain guide is installed lower than 1600 mm above floor level, it must be designed to prevent a child from being able to remove the cord/chain.
- If a cleat is used to secure the cord, it must be at least 1600 mm above floor level because a child is capable of unwinding a cord from a cleat.

**WARNING**

ALL WINDOW COVERINGS WITH CORD OR CHAIN

Great Job… Enjoy your new Veneta Blinds!

Operating your Blind
- Tilt the slats by using the twin cords.
- Raise or lower your blind with the lift cord.
- Pull the cord straight down and toward the centre of the blind to unlock, then move to the desired position.
- Note: When raising your blind, we recommend tilting the slats to about 45 degrees downwards; and support bottom rail with your hand while pulling the cord.

Maintaining your Blind
- Dust can be removed using a feather duster or vacuum with brush attachment on low suction.
- Clean your Timber Venetians using a warm damp cloth. Do not use solvents or chemicals.
- If the Safety Tassel happens to break apart, simply gather the cords without twisting and place into the slot as per diagrams to the right. Close the cord release door and pull the cords to make sure the Tassel is closed tightly.
